FAQ&Feedback

- 1.Only support 2.4GHz, not 5GHz.
- 2.The distance between the device and the router should not be too far away, which will affect the Wi-Fi signal.
- 3.Make sure the Wi-Fi password is entered correctly.
- 4.If the connection fails, try sharing the access point with another phone instead of the router's Wi-Fi. This method can help us determine if the Wi-Fi signal from the router is compatible with this product.
- 5.When the device is connected correctly, don't remove it; otherwise, it will be restored to factory settings and cannot be controlled directly.
- 6.If you change the Wi-Fi password, please reconnect. When restoring factory settings, you must turn off the lamp for 10 seconds and then try again.
